

At the forefront of personalised diagnostics and therapeutics

**Biosensis joins a team of researchers to establish a new Australian Research Council (ARC) training centre**

Biosensis is part of the team of companies and research organizations that was awarded Australian Research Council funding in June 2017. In collaboration with researchers in Singapore and across Australia, we are establishing the ARC Training Centre for Personalized Therapeutics Technologies. This new centre aims to develop high-throughput, real-time technologies, based on micro-fluidic systems, to provide improved patient screening, which will ultimately enable truly personalized diagnostics and therapeutic decisions.

This centre will be established from the \$3.1 million ARC seed-funding, together with a further \$10 million in cash and in-kind support from the partners (including Biosensis). This represents a significant step for Biosensis as we aim to remain at the forefront of medical research to ensure that you, our customers, have access to the best validated neuroscience reagents.
