

Mouse soluble oxidized low-density lipoprotein receptor 1/Soluble lectin-like oxidized LDL receptor 1/(sLOX-1/OLR1) ELISA 2plate

Catalogue No.:	BEK-2208-2P
Description:	The mouse Oxidized low-density lipoprotein receptor 1 (Ox-LDL receptor 1) Kit is a sandwich ELISA. The capture antibody is a monoclonal mouse Ox-LDL receptor 1 antibody pre-coated onto the 96-well strip plates provided in the kit. Test samples and standards of known Ox-LDL receptor 1 concentration are added to these wells and allowed to complex with the bound Ox-LDL receptor 1 antibody. A biotinylated anti-Ox-LDL receptor 1 antibody is then added. This detection antibody binds to the antigen thus completing the sandwich. After washing, an enzyme Avidin-Biotin-Peroxidase complex (ABC) is added which binds to the second antibody. The peroxidase substrate TMB is added to induce a coloured reaction product. The intensity of this coloured product is directly proportional to the concentration of Ox-LDL receptor 1 present in the samples. The purpose of this kit is the in-vitro quantitative determination of mouse Ox-LDL receptor 1 in samples such as sera, plasma, and cell culture supernates. This kit has been configured for research use only and is not to be used in diagnostic or clinical procedures.
