

Rabbit polyclonal antibody to human mitochondrial Mn superoxide dismutase (SOD2; 25-43): whole serum

Catalogue No.:	R-1596-100
Description:	Superoxide dismutase [Mn], mitochondrial destroys superoxide anion radicals which are normally produced within the cells and which are toxic to biological systems (Ref: SwissProt).
Batch No.:	See product label
Unit size:	100 ug
Antigen:	A synthetic peptide (KHSLPDLPYDGALEPHINC) of human/rat/mouse mitochondrial manganese Superoxide Dismutase (SOD2), conjugated to Keyhole Limpet Hemocyanin.
Other Names:	Superoxide dismutase [Mn], mitochondrial;
Accession:	P04179 SODM_HUMAN;
Produced in:	Rabbit
Applications:	IF, WB. Typical working dilutions for light microscopy are 1:500 to 1:1,000 depending on tissue and detection method. For IF, a dilution range of 1:50 to 1:100 is recommended. For WB, a dilution range of 1: 1,000 to 1: 4,000 is recommended. This antibody clearly detects a protein at approximately 24 kDa on WB of human brain tissue. Biosensis recommends optimal dilutions/concentrations should be determined by the end user.
Cross-reactivity:	Human; mouse; rat;
Form:	Lyophilized serum with 0.02% thimerosal
Reconstitution:	Reconstitute in sterile distilled water. Centrifuge to remove any insoluble material.
Storage:	At least 12 months after purchase at 2-8C (lyophilized formulations). After reconstitution, aliquot and store at -20C for a higher stability. Avoid freeze-thaw cycles.

Western Blot image of human brain tissue using Rabbit polyclonal antibody to human mitochondrial Mn superoxide dismutase (R-1596-100).
