

Neurotrophin 4/5 (NT4/5) Rapid ELISA Kit: Human, Mouse, Rat and Monkey (2 Plates)

Catalogue No.: BEK-2218-2P

Description: The Biosensis Neurotrophin 4/5 Rapid™ enzyme-linked immunosorbent assay (ELISA) Kit is a sandwich ELISA that allows the specific, fast and reliable quantification of NT4/5 in less than 4 hours in cell culture supernatants, human citrate-plasma and brain extracts only if used as directed. Please refer to the kit protocol for specific use instructions for each substrate application, in particular blood samples. Accurate quantification of NT4/5 in human citrate-plasma requires a heterophilic antibody (HA) blocker which can be purchased separately (BL-003-1000).

This ELISA kit consists of a pre-coated polyclonal anti-NT4/5 capture antibody, a biotinylated anti-NT4/5 detection antibody and horseradish peroxidase (HRP)-conjugated streptavidin. The addition of a substrate (3,3',5,5'-tetramethylbenzidine, TMB) yields a colored reaction product, which is directly proportional to the concentration of NT4/5 present in samples and protein standards.

This NT4/5 ELISA kit employs a recombinant human NT4/5 standard. The capture and detection antibodies will also detect NT4/5 from other species due to a high degree of NT4/5 amino acid sequence homology. Therefore, this ELISA kit can be used to quantify NT4/5 in many species including mouse, rat and monkey.

The antibodies used in this kit bind to epitopes within the mature domain of NT4/5. Thus, this ELISA kit will quantify the mature form of NT4/5, and may also detect the full-length pro-form of NT4/5.

This ELISA kit has not been tested for other applications. It has been configured for research use only and is not to be used for diagnostic or clinical procedures.

Related products: BL-003-1000, Heterophilic antibody blocker: Sample diluent additive for accurate quantification or NT4/5 in human citrate-plasma.

Batch No.: Refer to the product label.

Antigen: FUNCTION: Target-derived survival factor for peripheral sensory sympathetic neurons. SUBCELLULAR LOCATION: Secreted protein. TISSUE SPECIFICITY: Highest levels in prostate, lower levels in thymus, placenta, and skeletal muscle. Expressed in embryonic and adult tissues. SIMILARITY: Belongs to the NGF-beta family.

Other Names: Neurotrophin-5; NT-5; Neurotrophic factor 5; Neurotrophin-4; NT-4; Neurotrophic factor 4; NTF5; NTF4

Accession: NTF4_HUMAN

Specificity: Human.

Cross-reactivity: The capture and detection antibodies will also detect NT4/5 from other species due to a high

degree of NT4/5 amino acid sequence homology. Therefore, this ELISA kit can be used to quantify NT4/5 in many species including mouse, rat and monkey.

Storage:

Store at 2-8°C.

Expiry Date:

12 months from purchase.

Kit components:

The ELISA kit box contains 2 x 96 pre-coated strip plates, protein standards, detection reagents, wash and sample buffers and detailed protocols.

Range:

15.6 - 1000 pg/mL

Sensitivity:

This ELISA kit typically detects down to 25 pg/mL human NT4/5 (defined as 150% of blank value).

Kit protocol:

Please refer to our online product listing for current protocol/MSDS versions.

MSDS:

Please refer to our online product listing for current protocol/MSDS versions.

This standard curve generated in our laboratories is for demonstration purposes only, but can be used as a guide to expected performance. A standard curve should be generated for each assay.
