

Human TrkA ELISA Kit (2 plates)

Catalogue No.:	BEK-2335-2P
Description:	The human TrkA Kit is a sandwich ELISA. The capture antibody is a monoclonal mouse TrkA antibody pre-coated onto the 96-well strip plates provided in the kit. Standards of known TrkA concentration and test samples are added to these wells and allowed to complex with the bound TrkA antibody. A biotinylated polyclonal detection antibody is then added. This detection antibody binds to the antigen thus completing the sandwich. After washing, an enzyme Avidin-Biotin-Peroxidase complex (ABC) is added which binds to the second antibody. The peroxidase substrate TMB is added to induce a coloured reaction product. The intensity of this coloured product is directly proportional to the concentration of TrkA present in the samples. The purpose of this kit is the in-vitro quantitative determination of human TrkA in samples such as culture supernates, cell lysates and tissue homogenates. This kit has been configured for research use only and is not to be used in diagnostic or clinical procedures.
Batch No.:	See product labels
Antigen:	TrkA is a member of the neurotrophic tyrosine kinase receptor family. It is a membrane-bound receptor that upon neurotrophin binding, phosphorylates itself and members of the MAPK pathway. TrkA is required for high-affinity binding to nerve growth factor (NGF), neurotrophin-3 and neurotrophin-4/5 but not brain-derived neurotrophic factor (BDNF). TrkA leads to cell differentiations and may play a role in specifying sensory neuron subtypes. It has a crucial role in the development and function of the nociceptive reception system as well as establishment of thermal regulation via sweating.
Other Names:	Tropomyosin-related kinase receptor; High affinity nerve growth factor receptor; Neurotrophic tyrosine kinase receptor type 1; TRK1 transforming tyrosine kinase protein; p140-TrkA; Trk-A; NTRK1; TRK
Accession:	Uniprot: P04629; NTRK1_HUMAN
Specificity:	TrkA
Storage:	Store at 4C
Kit components:	The ELISA kit box contains 2 x 96-well pre-coated strip plates, protein standards, detection reagents, substrate buffer and detailed protocols.
Range:	156 pg/ml - 10,000 pg/ml
Sensitivity:	< 10pg/ml
Kit protocol:	Please refer to our online product listing for current protocol/MSDS versions.

FOR RESEARCH USE ONLY
