

Mouse monoclonal antibody to human Sodium channel protein type 8 subunit alpha [4G7]: IgG

Catalogue No.:	M-864-100
Description:	Sodium channel protein type 8 subunit alpha mediates the voltage-dependent sodium ion permeability of excitable membranes. Adopting opened or closed conformation in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na ions may pass in accordance with their electrochemical gradient. It is a multi-pass transmembrane protein that is widely expressed in neurons of the central and peripheral nervous system. There are four named isoforms. The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1, S2, S3, S5, S6) and one positively charged segment, S4. Segments S4 are thought to be the voltage-sensors and are characterised by a series of positively charged amino acids at every third position.
Batch No.:	See product label
Unit size:	100 ug
Antigen:	Partial recombinant human Sodium channel protein type 8 subunit alpha (amino acids 1854-1951) with a GST tag.
Clone:	4G7
Other Names:	Sodium channel protein type VIII subunit alpha; Voltage-gated sodium channel subunit alpha Nav1.6; SCN8A; MED
Accession:	SCN8A_HUMAN
Produced in:	Mouse
Purity:	Protein G purified immunoglobulin
Applications:	This antibody is recommended for WB, immunofluorescence and direct ELISA. The recommended dilution for this antibody is 10 ug/mL for immunofluorescence. Biosensis recommends optimal dilutions/concentrations should be determined by the end user.
Specificity:	Specificity has been confirmed by WB and direct ELISA against the antigen.
Cross-reactivity:	Human, mouse and rat. Other species have not been tested.
Form:	Lyophilised from PBS pH 7.2
Reconstitution:	Reconstitute in 100 uL of sterile water. Centrifuge to remove any insoluble material.
Storage:	After reconstitution keep aliquots at -20C for higher stability or at 2-8C with an appropriate antibacterial agent. Glycerol (1:1) may be added for additional stability. Avoid repetitive freeze/thaw cycles.
Expiry Date:	12 months after purchase

FOR RESEARCH USE ONLY

Mouse monoclonal antibody to human Sodium channel protein type 8 subunit alpha [4G7]: IgG

Immunofluorescent detection of Sodium channel protein type 8 subunit alpha expression in mouse NIH/ Swiss embryo cell lysate. The anti-Sodium channel protein type 8 subunit alpha primary antibody, catalogue number M-864-100, was used at a concentration of 10 µg/ml.
