

Human Fibroblast growth factor 9 ELISA Kit (2 plates)

Catalogue No.: BEK-2015-2P

Description: The human Fibroblast growth factor 9 (FGF9) Kit is a sandwich ELISA. The capture antibody is a monoclonal human FGF9 antibody pre-coated onto the 96-well strip plates provided in the kit. Human test samples and standards of known FGF9 concentration are added to these wells and allowed to complex with the bound FGF9 antibody. A biotinylated human FGF9 polyclonal antibody is then added. This detection antibody binds to the antigen thus completing the sandwich. After washing, an enzyme Avidin-Biotin-Peroxidase complex (ABC) is added which binds to the second antibody. The peroxidase substrate TMB is added to induce a coloured reaction product. The intensity of this coloured product is directly proportional to the concentration of FGF9 present in the samples. The purpose of this kit is the in-vitro quantitative determination of human FGF9 in samples such as sera, plasma, tissue lysates and cell culture supernates. This kit has been configured for research use only and is not to be used in diagnostic or clinical procedures.

Batch No.: See product labels

Other Names: Glia-activating factor; Heparin-binding growth factor 9; GAF; FGF9; FGF-9;

Accession: P31371 FGF9_HUMAN;

Specificity: Human FGF9

Storage: Store at 4°C

Kit components: The ELISA kit box contains 2 x 96 pre-coated strip plates, protein standards, detection reagents, substrate buffer and precise instructions.

Range: 62.5 pg/ml - 4,000 pg/ml

Sensitivity: < 15 pg/ml

Kit protocol: Please refer to our online product listing for current protocol/MSDS versions.

Typical Human FGF9 ELISA Kit Standard Curve
(TMB reaction incubated at 37°C for 12 min)

Concentration (pg/ml)	0.0	62.5	125	250	500	1000	2000	4000
O.D.	0.051	0.071	0.082	0.122	0.217	0.450	1.006	2.130

This standard curve is for demonstration purposes only. A standard curve should be generated for each assay.
