

Human MMP-7 ELISA Kit (2 plates)

Catalogue No.: BEK-2071-2P

Description: The human MMP-7 Kit is a sandwich ELISA. The capture antibody is a polyclonal human MMP-7 antibody pre-coated onto the 96-well strip plates provided in the kit. Human test samples and standards of known MMP-7 concentration are added to these wells and allowed to complex with the bound MMP-7 antibody. A biotinylated human MMP-7 polyclonal antibody is then added. This detection antibody binds to the antigen thus completing the sandwich. After washing, an enzyme Avidin-Biotin-Peroxidase complex (ABC) is added which binds to the second antibody. The peroxidase substrate TMB is added to induce a coloured reaction product. The intensity of this coloured product is directly proportional to the concentration of MMP-7 present in the samples. The purpose of this kit is the in-vitro quantitative determination of human MMP-7 in samples such as sera, plasma, tissue lysates and cell culture supernates. This kit has been configured for research use only and is not to be used in diagnostic or clinical procedures.

Batch No.: See product labels

Specificity: Human MMP-7

Storage: Store at 4°C

Kit components: The ELISA kit box contains 2 x 96 pre-coated strip plates, protein standards, detection reagents, substrate buffer and precise instructions.

Range: 156 pg/ml - 10,000 pg/ml

Sensitivity: < 6 pg/ml

Kit protocol: Please refer to our online product listing for current protocol/MSDS versions.

Typical Human MMP-7 ELISA Kit Standard Curve
(TMB reaction incubated at 37°C for 18 min)

Concentration (pg/ml)	0.0	156	313	625	1250	2500	5000	10,000
O.D.	0.026	0.077	0.107	0.278	0.424	0.949	1.535	2.293

This standard curve is for demonstration purposes only. A standard curve should be generated for each assay.
