

Human Endoglin/CD105 ELISA Kit (2 plates)

Catalogue No.: BEK-2153-2P

Description: The human Endoglin/CD105 Kit is a sandwich ELISA. The capture antibody is a monoclonal human Endoglin/CD105 antibody pre-coated onto the 96-well strip plates provided in the kit. Human test samples and standards of known Endoglin/CD105 concentration are added to these wells and allowed to complex with the bound Endoglin/CD105 antibody. A biotinylated human Endoglin/CD105 polyclonal antibody is then added. This detection antibody binds to the antigen thus completing the sandwich. After washing, an enzyme Avidin-Biotin-Peroxidase complex (ABC) is added which binds to the second antibody. The peroxidase substrate TMB is added to induce a coloured reaction product. The intensity of this coloured product is directly proportional to the concentration of Endoglin/CD105 present in the samples. The purpose of this kit is the in-vitro quantitative determination of human Endoglin/CD105 in samples such as sera, plasma, tissue lysates and cell culture supernates. This kit has been configured for research use only and is not to be used in diagnostic or clinical procedures.

Batch No.: See product labels

Other Names: CD105; ENG; END;

Accession: P17813 EGLN_HUMAN;

Specificity: Human Endoglin/CD105

Storage: Store at 4°C

Kit components: The ELISA kit box contains 2 x 96-well pre-coated strip plates, protein standards, detection reagents, substrate buffer and detailed protocols.

Range: 156 pg/ml - 10,000 pg/ml

Sensitivity: < 5 pg/ml

Kit protocol: Please refer to our online product listing for current protocol/MSDS versions.

Typical Human Endoglin/CD105 ELISA Kit Standard Curve
(TMB reaction incubated at 37°C for 7 min)

Concentration (pg/ml)	0.0	156	313	625	1250	2500	5000	10,000
O.D.	0.069	0.118	0.166	0.280	0.462	0.764	1.310	2.056

This standard curve is for demonstration purposes only. A standard curve should be generated for each assay.
