

## Chicken polyclonal antibody to Internexin alpha

<b>Catalogue No.:</b>	C-1377-50
<b>Description:</b>	Neurofilaments can be defined as the intermediate or 10nm diameter filaments found in neuronal cells. They are composed a mixture of subunits which often includes the neurofilament triplet proteins, NF-L, NF-M and NF-H. Neurofilaments may also include peripherin, alpha-internexin, nestin and in some cases vimentin. Alpha-internexin is a ~66 kDa Class IV intermediate filament subunit expressed in large amounts early in neuronal development, but is downregulated in many neurons as development proceeds. Many classes of mature neurons contain alpha-internexin in addition to NF-L, NF-M and NF-H. In some mature neurons alpha-internexin is the only neurofilament subunit expressed. Antibodies to alpha-internexin are therefore unique probes to study and classify neuronal types and follow their processes in sections and in tissue culture. In addition the very early developmental expression of alpha-internexin means its presence is an early and convenient diagnostic feature of neuronal progenitors cells and other cell committed to the neuronal lineage.
<b>Batch No.:</b>	See product label
<b>Unit size:</b>	50 uL
<b>Antigen:</b>	Recombinant rat alpha-internexin expressed and purified from E. coli
<b>Isotype:</b>	IgY
<b>Other Names:</b>	66 kDa neurofilament protein; NF-66; Neurofilament-66; Alpha-internexin; Alpha-Inx; Neurofilament 5; INA; NEF5;
<b>Accession:</b>	Q16352 AINX_HUMAN; P23565 AINX_RAT;
<b>Produced in:</b>	Chicken
<b>Applications:</b>	Western Blotting (WB) and Immunocytochemistry (IC). A dilution of 1:5,000 - 10,000 is recommended for WB. A dilution of 1:500-1,000 is recommended for IC. Biosensis recommends optimal dilutions/concentrations should be determined by the end user.
<b>Specificity:</b>	The specificity of this antibody has been confirmed by WB. This antibody is specific for the 64-66 kDa alpha-internexin protein. Molecular weight will depend on species.
<b>Antibody Against:</b>	Internexin alpha
<b>Cross-reactivity:</b>	Human, Rat, Mouse, Feline. It is predicted to react with other mammals.
<b>Form:</b>	Lyophilised with 5% trehalose
<b>Appearance:</b>	White powder
<b>Reconstitution:</b>	Reconstitute in sterile distilled water. Centrifuge to remove any insoluble material.
<b>Storage:</b>	After reconstitution of lyophilised antibody, aliquot and store at -20C for a higher stability. Avoid freeze-thaw cycles.
<b>Expiry Date:</b>	12 months after purchase

## Chicken polyclonal antibody to Internexin alpha

Mixed neuron glia cultures stain with Chicken polyclonal antibody to Internexin alpha C-1377-50 (red) and counterstained with Rabbit polyclonal antibody to Coronin 1a: Whole serum, R-1335-50 (green) which is an excellent marker of microglia and lymphocytes. This internexin antibody is an excellent marker of neuronal processes in these cultures.
