

Human Activin A ELISA Kit (2 plates)

Catalogue No.:	BEK-2001-2P
Description:	The human Activin A Kit is a sandwich ELISA. The capture antibody is a monoclonal Activin A antibody pre-coated onto the 96-well strip plates provided in the kit. Human test samples and standards of known Activin A concentration are added to these wells and allowed to complex with the bound Activin A antibody. A biotinylated Activin A monoclonal antibody is then added. This detection antibody binds to the antigen thus completing the sandwich. After washing, an enzyme Avidin-Biotin-Peroxidase complex (ABC) is added which binds to the second antibody. The peroxidase substrate TMB is added to induce a coloured reaction product. The intensity of this coloured product is directly proportional to the concentration of Activin A present in the samples.
Batch No.:	See product labels
Other Names:	Inhibin beta A chain; Activin beta-A chain; Erythroid differentiation protein; EDF; INHBA;
Accession:	P08476 INHBA_HUMAN;
Specificity:	Human; Mouse; Rat;
Storage:	Store at 2-8C
Kit components:	The ELISA kit box contains 2 x 96-well pre-coated strip plates, protein standards, detection reagents, substrate buffer and detailed protocols.
Range:	15.6 pg/mL - 1,000 pg/mL
Sensitivity:	< 12pg/ml
Kit protocol:	Please refer to our online product listing for current protocol/MSDS versions.

IX: Typical Standard Curve (for reference only, not to be used for actual data)

Concentration pg/ml	0.0	15.6	31.2	62.5	125	250	500	1000
OD	0.015	0.042	0.066	0.11	0.231	0.457	1.017	2.396

This standard curve is for demonstration purposes only. A standard curve should be generated for each assay.
